

CE3 workshop

Sustainable use of energy

Thursday, 5th of November
2020, 13.30 – 16.30. I

CE3 workshop: sustainable use of energy

In the course of the **climate change** a **sustainable use of energy** has become even **more important**. The exploitation of fossil energy sources has far-reaching **effects on our planet** and all the life on it. Even though we know these bad effects and in the last years more and more get in contact with them, for example in form of extraordinary heat waves in summer, the **worldwide efforts** to get independent from fossil fuels are **below its potential**.

One difficulty regarding the consumers of fossil energy is, that the prices are too low. This is one reason why many people do not take much care of their **use of energy**. Another big reason is a general **lack of awareness** regarding the sustainable use of energy. This workshop is carried out by the Center of Innovative Energy Systems (ZIES) from Hochschule Düsseldorf and will give an **overview about of the energy sectors**. What can each of us do to **reduce the impact of climate change**? We will illustrate **innovative energy solutions** and investigate fields for further **sustainable product innovations**.

The workshop takes place on **Thursday, 5th of November 2020, 13.30 – 16.30**. If you want to participate, send a e-mail to: rada.ille@hs-duesseldorf.de
